

PROVIDING SOLUTIONS FOR MEANINGFUL USE

CINA's Quality Suite™ has a wide range of product offerings to assist providers participating in the Centers for Medicare and Medicaid (CMS) "Meaningful Use" incentive program under the 2009 American Recovery and Reinvestment Act (ARRA). The **CINA Quality Suite™** offers innovative technology solutions for data acquisition, aggregation, and standardization to facilitate the use of electronic clinical data for informed decision making and allowing providers to "meaningfully use" clinical data for improved care.

Eligible Providers (EP) will be required to have implemented an EHR for at least 90 consecutive days by the end of 2011 to qualify for the maximum incentives under the program. Beginning in Year 1, the EP only has to attest to the use requirements of the EHR. However, beginning in Year 2 of the program, EP's will be required to submit data as proof of EHR implementation in order to continue receiving incentive funds.

Requirements of EHR utilization are outlined in 25 "Meaningful Use" objectives. Objectives do not have to be met solely through use of an EHR. Practices may use any combination of certified electronic medical record technologies to meet meaningful use requirements. Using the **CINA Quality Suite™**, EP's can fulfill the reporting requirements for many of the Meaningful use objectives.

CINA QUALITY SUITE™ FACILITATING MEANINGFUL USE

- Generate lists of patients by condition / disease (Disease Registry)
- Create reminders to patients for prevention / follow-up care
- Implement five clinical decision support rules relevant to the practice population
- Provide patients with an electronic copy of their health information
- Provide a clinical summary to the patient for each office visit
- Exchange key clinical information among providers and other entities
- Submit electronic data to state immunization registries
- Provide electronic surveillance data to public health agencies
- Electronically report ambulatory quality measures to CMS and / or state data warehouses
- Protect electronic health information using appropriate data security technologies

Contact a Representative today to find out how CINA can complement your EHR for full participation in the Meaningful Use Incentive Program.

"CINA allows us to pull information together from nearly anywhere in the chart bringing the patients history together in a very user friendly way without requiring cumbersome, redundant data entry."

Matthew Winkleman, MD
Primary Care Group, Harrisburg, IL
Allscripts Professional™ since 2005
CINA Client since 2009

"The CINA patient recommendation report helps primary care physicians do a better job. For the first time since we have been using the EMR, the [EMR] system is finally giving something back to the physician."

Colleen Conry, MD
Dept of Family Medicine,
University of Colorado Denver
Allscripts Enterprise™ since 2003

"CINA has been a fantastic tool to allow us to stay on top of delivering quality, appropriate care to our patients. Easy to use, comprehensive and customizable."
